

## Relaxing controllable lighting

A range of highly decorative brushed stainless steel chandeliers. All supplied with either a powerful 150W metal halide illuminator or a fully remote control LED option, both of which are hidden within the base.

The use of glass side sparkle fiber gives these chandeliers a unique look which is much different from others on the market. Tails lengths can be chosen from maximum lengths between 3.28 feet (1 meter) and 32.8 feet (10 meters) meaning that you will find a product to suit almost any environment.

We have 4 standard designs shown overleaf which are available ex-stock for fast delivery, we can also make almost any shape and size base to your requirements - if you have any idea let us know and we'll make it a reality.

Bases are available in two depths - shallow 3" (77mm) and deep 6" (150mm). The deep option suits our metal halide illuminator whilst the shallow depth is perfect for our LED illuminator.

All bases are manufactured from stainless steel and as standard are finished in brushed stainless effect. If this does not fit your decor the bases can be custom finished to your specification. The bases have an internal frame which has mounting points for attachment to ceiling and a secure tray for locating the lightsource.

### Metal Halide Illuminator

A high powered 150W metal halide illuminator which is mounted and secured within the chandelier upstand. This means that normally, no access above the ceiling is required for installation. The illuminator is pre-installed with a 6 color colorwheel and can optionally be fitted with our Varicolor wheel, allowing you to customise the colors to your own choice.

### LED Illuminator

The MicroLED 4000 measures only 4.2" (106mm) x 3.7" (94mm) x 2.7" (68mm) yet features full remote control operation which allows you to control the light color and color-cycling effects from the comfort of your armchair.

### Corona Circular Chandelier

Available in three diameters

**cor-cs** 1.48 feet (450mm)

**cor-cm** 2.3 feet (700mm)

**cor-cl** 4.7 feet (1450mm)

Finished in highly decorative brushed stainless steel.

### Corona Wave Chandelier

Available in two sizes

**cor-lw**

7.2 feet x 1.1 feet

2200mm x 325mm

4.1 feet x 1.1 feet

1250mm x 325mm

Finished in highly decorative brushed stainless steel.

### Corona Rectangular Chandelier

Available in two sizes

**cor-rl**

7.2 feet x 1.1 feet

2200mm x 325mm

**cor-rs**

3.1 feet x 1.1 feet

950mm x 325mm

Finished in highly decorative brushed stainless steel.

### Corona Elliptical Chandelier

Available in one size

**cor-el**

4.1 feet x 2 feet

1250mm x 625mm

Finished in highly decorative brushed stainless steel.

The circular, wave and elliptical all have four tiers of holes to take the fiber optic tails. This is what helps to create the dramatic impact these chandeliers have. The rectangular chandelier has three tiers, but is no way diminished by this. Each chandelier's brushed stainless steel base is either 150mm or 77mm deep.

All chandelier bases are available with a choice of fiber drop lengths from short 3.28 feet (1 meter) drop to the longest 32.8 feet (10 meter) drop. Please be aware that for longer drops you will need to specify the metal halide lightsource option, and also that light output is slightly reduced in longer lengths of fiber.
